

Press release

Toulouse, February 4th, 2020

HEMERIA signs with Kinéis the contract to supply the 25 satellites of the IoT constellation.

In the wake of the success of the 100 million euro fundraiser, in which HEMERIA participated, Kinéis confirms the order from HEMERIA for a constellation of 25 nanosatellites dedicated to the Internet of Things (IoT).

This historic order for HEMERIA comes just one month after the successful launch of the ANGELS prototype nanosatellite, the first French industrial nanosatellite co-developed by CNES and HEMERIA. This success bodes well for the Kinéis constellation, which will benefit from the same industrial team as that of ANGELS: HEMERIA, THALES ALENIA SPACE and SYRLINKS.

Nicolas MULTAN, CEO of HEMERIA declares: "*It is obviously a great pride to continue the Nanosat adventure at HEMERIA with this ambitious program! The challenge is both technical, human and planning. We are entering the New Industrial Space on one level with our Nanosats weighing 20 to 50 kgs. Their lifespan, reliability and the ability to carry multiple payloads are differentiating advantages in a booming international market. It is a great responsibility that we have to be the pillar of the French sector of Nanosat and we assume it with great honor!* " and Alexandre TISSERANT, President of Kinéis, adds : " *We are very proud and serene to take up with HEMERIA the challenge of the Kinéis constellation, initiated by CLS. The experience acquired with the success of ANGELS, precursor of the Kinéis nanosatellites, strengthens our confidence in the HEMERIA team to carry out this industrial adventure.* "

HEMERIA - www.hemeria-group.com - @HEMERIA1

HEMERIA is a major player in the space industry. HEMERIA designs and manufactures first-class space products that meet the needs of corporate and scientific customers in commercial, defence and safety applications. HEMERIA develops high-performance nanosatellites giving non-technical professionals a fast, competitive and efficient access to space. HEMERIA is also one of the top three European suppliers of panels, thermal protections and interconnection devices for bigger satellites.

KINEIS - www.kineis.com - @KineisIoT

Founded in 2019, Kinéis is a satellite operator and a global connectivity provider. It inherited the forty years of CNES and CLS expertise with the Argos system to develop reliable technology that provides easy access to useful satellite data. In order to make life easier for professionals and individuals and to encourage them to use its product and services, Kinéis locates and connects objects wherever they are on the planet. For its first year of existence, Kinéis achieved a turnover of nearly 5 million euros and already employs 25 people.
